**Private Drinking Water Well Survey and Sampling Work Plan  
DuPont Chambers Works Facility, Deepwater, New Jersey**

Dear Mr. Faranca:

E.I. DuPont de Nemours and Company (DuPont) is voluntarily conducting a Private Drinking Water Well Survey and Sampling Program within a two-mile radius surrounding the DuPont Chambers Works Facility in Deepwater, New Jersey. Attached please find 4 copies of the Private Drinking Water Well Survey and Sampling Work Plan, DuPont Chambers Works Facility, Deepwater, New Jersey (Work Plan). This Work Plan was prepared to describe the survey and sampling program and how the program will be implemented.

If you have any questions, please do not hesitate to call me at 302-992-6820.

Very truly yours,

A handwritten signature in dark ink, appearing to read "Andrew S. Hartten", written in a cursive style.

## 1.0 INTRODUCTION

The New Jersey Department of Environmental Protection (NJDEP) has requested that E.I. DuPont de Nemours and Company (DuPont) test residential and business private drinking water wells for perfluorooctanoic acid (PFOA) around the DuPont Chambers Works Facility (Chambers Works) located in Deepwater, New Jersey. To address this NJDEP request and as part of DuPont ongoing stewardship, DuPont has volunteered (DuPont, 2008) to conduct the following activities.

- ❑ DuPont will voluntarily conduct a Private Drinking Water Well Survey and Sampling Program (survey and sampling program) within a two-mile radius surrounding Chambers Works in New Jersey.
- ❑ DuPont will sample qualified private drinking water wells which are within the two-mile radius surrounding Chambers Works, to determine if PFOA concentrations in drinking water wells measure 0.5 ppb or greater.
- ❑ In the event that any of the sampled private drinking water wells measure 0.5 ppb or greater PFOA, DuPont will offer to take appropriate measures to provide drinking water for consumption that is below 0.5 ppb PFOA.
- ❑ DuPont will continue to work with NJDEP to identify any additional private drinking water wells within the two-mile radius surrounding Chambers Works in New Jersey for inclusion in the survey and sampling program.

This Private Drinking Water Well Survey and Sampling Work Plan (Work Plan) is prepared to describe the survey and sampling program and how the program will be implemented. This Work Plan is organized into the following sections:

- ❑ Section 2.0 Private Drinking Water Well Survey and Sampling Program
- ❑ Section 3.0 Drinking Water Provisions
- ❑ Section 4.0 Schedule
- ❑ Section 5.0 References

Note that perfluorooctanoic acid (PFOA) is a disassociated form of ammonium perfluorooctanoate (APFO). MPI Research (MPI; formerly Exygen Research), located in State College, Pennsylvania, and New Jersey Certified for PFOA, will perform all water analysis for this project upon approval by NJDEP. During analysis, the perfluorooctanoate anion ( $\text{PFO}^-$ ) is measured; however, the analytical results are mathematically converted and reported as APFO and PFOA by MPI. Therefore, analytical results for this survey and sampling program will be reported as APFO and PFOA. Additional information on analytical reporting can be found in the *Perfluorooctanoic Acid (PFOA) Quality Assurance Project Plan with Sampling and Analysis Plan, DuPont Chambers Works, Deepwater, New Jersey (QAPP)*, which was submitted as Appendix A of the *Perfluorooctanoic Acid Groundwater Investigation Work Plan* (DuPont, 2007) and was previously approved by NJDEP.

## **2.0 PRIVATE DRINKING WATER WELL SURVEY AND SAMPLING PROGRAM**

This section describes the plan of work that will be implemented during the Private Drinking Water Well Sampling and Survey Program.

### **2.1 Survey Area and Well Search Results**

Figure 2.1 provides the 2-mile boundary of the geographic area to be surveyed in New Jersey. 127 residential or business private drinking water wells were identified based on the results of a well search conducted by DuPont during the first quarter of 2008 (Table 2.1). The well search list was updated in December 2008 through the analysis of tax and lot property lists for the Cedar Crest Manor Development. As of December 23, 2008, Table 2.1 includes a total of 180 residences and businesses. However, many of the residences and businesses do not have complete mailing addresses. DuPont will continue to work with NJDEP to obtain complete mailing addresses for each residence and business listed in the spreadsheet so that all of these well owners can be included in the survey and sampling program.

### **2.2 Plan of Work**

The plan of work for the Private Drinking Water Well Sampling and Survey Program is described below and implementing consists of three tasks:

- ☐ Public Notification and Eligibility Determination (Section 2.2.1)
- ☐ Sampling and Analysis (Section 2.2.2), and
- ☐ Reporting of Results (Section 2.2.3).

#### **2.2.1 Public Notification and Eligibility Determination**

The public notification process described below is being finalized and maybe modified.

Public notification of the survey and sampling program will occur by way of a residence-specific mailing within the survey area on a date to be determined by NJDEP. This first public notification letter will be finalized by NJDEP and sent to DuPont for approval prior to mailing to well owners within the survey area that have sufficient information to be contacted via mail. The letters will be mailed by NJDEP or DuPont (to be determined by NJDEP).

In these survey notification letters, NJDEP will request that private drinking water well owners respond to the survey request within 30 days. The notification letters will provide a DuPont toll-free call center number [and the hours of operation (8:00AM - 8:00 PM, Monday - Friday)] that private drinking water well owners can call to participate in the survey. The notification letters will also specify that drinking water well owners can call a NJDEP contact at an 800 number with any questions about the Private Drinking Water Well Survey and Sampling Program. DuPont assumes NJDEP will respond promptly to

these calls. Each letter will also have a unique number clearly identified on the letter that is associated with the well information in the spreadsheet utilized by the call center to record data collected during the survey. This spreadsheet will be based on the information contained in the well search conducted by DuPont.

When a private drinking water well owner calls the DuPont toll-free call center, the caller will be connected with a customer service representative who will verify or edit their contact information as needed, ask the caller a series of questions regarding well water use, and will forward the survey data to DuPont (or its authorized representatives). To qualify for sampling, the private drinking water well must be a source of drinking water for the well owner, or for the occupant in the case of rental properties. The well owner will then be called back within three to five days and well sampling will be scheduled, if appropriate.

A second residence-specific notification letter will be sent out approximately 30 days after the date of the first letter, to those well owners who have not responded to the initial request to participate in the survey. The second letter will also be issued by NJDEP, forwarded to DuPont for approval prior to mailing, and will be mailed by either NJDEP or DuPont (to be determined by NJDEP). This second letter will be very similar to the first letter mailed and will encourage private drinking water well owners to respond to the survey and will request a response within 30 days of the date on the second letter.

## **2.2.2 Sampling and Analysis**

At all locations where private drinking water wells are identified during the Private Drinking Water Well survey and Sampling Program and determined to be qualified for sampling, a DuPont Representative will sample the drinking water well, if permission to sample is granted by the owner. Prior to sampling the well, the DuPont Representative will obtain coordinates using a Global Positioning System (GPS) to document the well location. Sampling of wells will be conducted as described in the QAPP (DuPont, 2007) that was approved by NJDEP. DuPont has selected MPI to be used for well water analyses. As stated in the Introduction, during analysis, the perfluorooctanoate anion (PFO<sup>-</sup>) is measured; however, the analytical results are mathematically converted and reported as APFO and PFOA by MPI. DuPont has worked with MPI to establish a reliable procedure published in the scientific literature by MPI Research (Risha et al., 2005) for PFO<sup>-</sup> measurement and APFO and PFOA reporting.

## **2.2.3 Reporting of Results**

DuPont will provide private drinking water well results to NJDEP and the well owner within 7-10 days after the data have undergone the DuPont internal data quality control/quality assurance procedures and are considered final by MPI.

The result report will consist of a letter to the private drinking water well owner and the analytical result sheet (or sheets if duplicate samples were collected) for the sample(s) from MPI. The analytical result sheet will include the sample identification, the date sampled, the APFO and PFOA result reported, the limit of detection, and the limit of quantification.

If the PFOA concentration measured in the drinking water well is equal to or greater than 0.5 ppb, DuPont will inform the well owner that the well is qualified to receive an offer from DuPont to provide drinking water for consumption that is below 0.5 ppb PFOA. If the PFOA concentration measured is less than 0.5 ppb, the well owner will be thanked for participating in the survey and sampling program.

DuPont and NJDEP will conduct monthly reviews of results.

### **3.0 DRINKING WATER PROVISIONS**

As stated in Section 1.0, in the event that any of the sampled private drinking water wells measure 0.5 ppb or greater PFOA, DuPont will offer to take appropriate measures to provide drinking water for consumption that is below 0.5 ppb PFOA.

There are several possible alternative means of providing a resident with drinking water for consumption that contains below 0.5 ppb PFOA. Which alternative will be offered is a function of the specific conditions, permit requirements and other variables encountered at the residence where the private drinking water well is located. The alternative offered will be determined by DuPont and subject to reasonable terms and conditions. The offer will be subject to the drinking water well owners consent, but DuPont shall have no obligation to offer more than one alternative. Possible alternatives include:

- ☐ Connecting to a public water supply, provided the PFOA in that public water supply contains less than 0.5 ppb PFOA, where the well owner is responsible for future water bills,
- ☐ Providing bottled water, or
- ☐ Installing a point of treatment granulated activated carbon (GAC) treatment system at the residence.

## **4.0 SCHEDULE**

Work relating to Sections 2.0 (Private Drinking Water Well Survey and Sampling Program) is already ongoing. Survey notification letters to drinking water well owners are being finalized by NJDEP and the DuPont call center is being set up. Public notification of the survey and sampling program will occur by way of a residence-specific mailing within the survey area on a date to be determined by NJDEP. The second residence-specific mailing will be sent out on approximately 30 days after the date of the first notification, to those well owners who have not responded to the initial request to participate in the survey. DuPont and NJDEP will conduct monthly reviews of the results.
